

Success story

Kitchen construction digitised smart

Swedish furniture giant counts on mQuest® and Intrexx

Foto: IKEA Österreich

RIMFORSA, METOD, or KNOXHULT? In order to digitise the entire communication in kitchen construction with subcontractors, the giant Swedish furniture store counts on a smart combination of the mobile offline solution mQuest® and Intrexx. The system was designed, implemented and rolled out together with Xinger Solutions, the Austrian specialist for digital work environments.

From the first measurement including electrical, gas and water installations up to the final assembly, all data and tasks run through a central system and can be easily edited and controlled. In addition, employees have access to the current status of the kitchen project at any time. This established clearness, transparency and satisfaction among all participants.

Product in use: mQuest®

Automatic assignment of orders and digital forms

Documentation of the entire process including photo proof and picture markings

Smart combination of mQuest® app and Intrexx web portal

Easy and fast integration into Intrexx by service-oriented interface
